## Coding exercise on variables

lec.9

①

WAP to swap values of variables.

```
a = input("enter value of a = ")
```

```
b = input("enter value of b = ")
```

```
temp = a
```

```
a = b
```

```
b = temp
```

```
print("a = " + a) or print("a = ", a)
```

```
print("b = " + b) or print("b = ", b)
```

Output:-

```
enter value of a = 1
```

```
enter value of b = 2
```

```
a = 2
```

```
b = 1
```
